

Additional Software Requirements

Third Party Libraries

The new C++ ConnectionServerApiExample project requires two third party libraries: boost and rapidjson. Both libraries are free and open source and may be used in future C++ example projects.

Boost can be downloaded from: <https://www.boost.org/users/download/>. You can also download pre-built windows binaries from: <https://sourceforge.net/projects/boost/files/boost-binaries/>.

RapidJson can be downloaded from: <https://github.com/Tencent/rapidjson/>.
